CAREER OBJECTIVE

Full-Stack Developer and AI Engineer with a strong foundation in Python, Java, and TypeScript, and hands-on project experience building production-grade systems from RAG pipelines and agentic LLM workflows to backend APIs and database architecture. Skilled in LangChain, LangGraph, LlamaIndex, FastAPI, and Angular, having built and shipped end-to-end applications that connect AI models to real backend and database logic. Strong analytical and problem-solving ability, looking to contribute to teams building AI-powered products and scalable backend systems.

EDUCATION

Institute of Information and Communication Technology (IICT), MGM University 2023 – 2027
Bachelor of Technology in Information Technology — CGPA: 8.6

SKILLS

Programming Languages: Java, Python, TypeScript

Frontend & Backend: HTML, CSS, Tailwind CSS, Angular, Spring Boot, FastAPI, RESTful APIs, Flask

Databases: SQL (MySQL, PostgreSQL), Redis, Vector Stores (FAISS)

Libraries & Frameworks: Angular, Angular Material, React (basics), React Native (basics)

AI/LLM: RAG, LangChain, LangGraph, LangSmith, LlamaIndex, LlamaParse

Developer Tools: Git, GitHub, Docker, Postman, CI/CD

PROJECTS

Cyber Fraud Transaction Tracing & Visualization Tool

[GitHub](#)

- Designed normalized MySQL and PostgreSQL schemas and wrote SQL queries to parse, link, and deduplicate transaction records extracted from multi-format bank statements.
- Used Redis to cache metadata and optimize repeated query performance, and visualized query output as fund-flow graphs (NetworkX) with a tabular view for investigators.

Eval AI

[GitHub](#)

- Built a human-like conversational interview simulator that dynamically adapts, asking follow-up questions and responses based on the candidate's answers and conversation context.
- An agentic interview workflow build using Angular, LangGraph for stateful conversation flow, FAISS for semantic matching, and FastAPI/Supabase for backend execution and storage.

Resume-Extractor

[GitHub](#)

- Developed and published a spatial-aware PDF extraction Python package for reconstructing logical layouts and tables from unstructured and scanned documents.
- Implemented spatial text processing and table reconstruction using pdfplumber and Regex to preserve relationships between extracted text, rows, columns, and tabular structures.

ACHIEVEMENTS & CERTIFICATES

IICT, MGMU Bachelor of Technology in Information Technology — 1st Rank in FY IT	2023 – 2027
2nd Place Winner Wireless Power Transmission Project, MGM University	September 8, 2023
Participant AI Programming Competition, UDICT, MGM University	September 9, 2023

EXTRA-CURRICULAR ACTIVITIES

- Karate competitor – Won medals in Kata and Kumite.
- Passionate about sketching and visual design, focusing on detail and composition.
